Project Milestone 2
Team name: Team 5
Group Number: 014-05

Project Features list

- **Profile Feature:** Users will be able to customize their profiles to their preferences. For example, a user could change their default background color to blue, and every time they login, the background color of the site will be blue.
- **Trade snack feature:** Users will be able to trade snacks. Essentially, a user can request a trade from a friend, and their friend can accept or decline the trade.
- **Household Feature:** Users will be able to form groups with other users called households. This will make it easier to track what a user owes. For example, a user can form a household with their roommates and make payments to their roommates within the household.
- **Request/Make Payment:** Users can also request/make payments to other users directly. This could link to third party apps like PayPal, Venmo, etc.
- **Log-In:** Users can log into their accounts and use the website with their previously set profile preferences. This feature will also allow users to create a new account if they are new to the site.
- **Stats Page:** This page will display statistics that show how much a user is due to pay or be paid based on the amount of requests they have sent or been sent. This should help users to moderate how much they are spending.

Requirements: Jira (Agile) User Stories. Some stories were added to our current sprint, and some are in the backlog.
https://csci-3308-spring22-014-5.atlassian.net/jira/software/projects/T5/boards/1

Project Plan: Jira Roadmap
https://csci-3308-spring22-014-5.atlassian.net/jira/software/projects/T5/boards/1/roadmap?timeline=WEEKS

Wireframes and Design: Figma

Figma Link:

We will be using a Bootstrap skeleton for our UI.

Individual Contributions:

Reid King: I added user stories for each of the features we've outlined. I assigned them weights and added the appropriate stories to our current sprint. I also created epics for the Jira roadmap that should give an approximation of when features will be completed. Last Commit: https://github.com/cub-csci-3308-spring-2022/csci-3308-spring22-014-05/commit/096082b627caa69ef7d9330deaf264407f488531

Pearce Campbell: I collaborated with Reid on the Figma mock-up to ensure adequate representation of our app's look and features for the milestone.
